SGM9123
Triple, 8MHz, 3rd-Order SDTV Video Filter Driver

GENERAL DESCRIPTION

SGM9123 is a video buffer which integrates triple 6dB gain rail-to-rail output drivers and triple 3rd-order output reconstruction filters with a -3dB bandwidth of 8MHz and 44V/μs slew rate. SGM9123 provides improved image quality compared with passive LC filters and discrete drivers solution. Operating from single power supply ranging from 2.5V to 5.5V and sinking an ultra-low 7.4mA quiescent current, the SGM9123 is ideally suited for battery powered applications.

SGM9123 can be DC-coupled or AC-coupled with input video signal, such as the output stage of DAC to eliminate out-of-band noise. Internal diode clamps and bias circuitry may be used if AC-coupled inputs are required. SGM9123 also integrates an internal level shift circuit which avoids sync-pulse being clipped and allows DC-coupled output. The drivers in SGM9123 can drive DC- or AC-coupled single (150Ω) or dual (75Ω) loads.

The SGM9123 is available in Green SOIC-8 package and ESD (HBM) reaches 8KV.

FEATURES

- **Triple 3rd-Order 8MHz (SD) Filters**
- **Transparent Input Clamping**
- **6dB Output Driver Gain and Drive Dual Video Loads**
- **Rail-to-Rail Output**
- **Input Voltage Range Includes Ground**
- **AC- or DC-Coupled Inputs**
- **AC- or DC-Coupled Outputs**
- **Operates from 2.5V to 5.5V Single Power Supply**
- **Low Power (2.5mA/Channel)**
  7.4mA Total Supply Current
- **Available in Green SOIC-8 Package**

APPLICATIONS

Video Amplifiers
Cable and Satellite Set-Top Boxes
Communications Devices
Video on Demand
Portable and Handheld Products
Personal Video Recorders
DVD Players
SDTVs

PIN DESCRIPTION

PIN	NAME	FUNCTION
1	IN1	Video Input. Channel 1.
2	IN2	Video Input. Channel 2.
3	IN3	Video Input. Channel 3.
4	$+V_S$	Power Supply.
5	GND	Ground.
6	OUT3	Filtered Output. Channel 3.
7	OUT2	Filtered Output. Channel 2.
8	OUT1	Filtered Output. Channel 1.

ABSOLUTE MAXIMUM RATINGS

Supply Voltage, GND to $+V_S$..6.5V
Input Voltage.................................... GND - 0.3 V to $(+V_S)$ +0.3V
Storage Temperature Range..............................-65℃ to +150℃
Junction Temperature..160℃
Operating Temperature Range .... -40℃ to +125℃
Power Dissipation, P_D @ T_A = 25℃
SOIC-8 ....0.8W
Package Thermal Resistance
SOIC-8, θ_{JA}...125℃/W
Lead Temperature Range (Soldering 10sec)
.... 260℃
ESD Susceptibility
HBM..8000V
MM...400V

NOTE:
Stresses beyond those listed under "Absolute Maximum Ratings" may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated in the operational sections of the specifications is not implied. Exposure to absolute maximum rating conditions for extended periods may affect device reliability.

CAUTION

This integrated circuit can be damaged by ESD if you don't pay attention to ESD protection. SGMICRO recommends that all integrated circuits be handled with appropriate precautions. Failure to observe proper handling and installation procedures can cause damage. ESD damage can range from subtle performance degradation to complete device failure. Precision integrated circuits may be more susceptible to damage because very small parametric changes could cause the device not to meet its published specifications.

SGMICRO reserves the right to make any change in circuit design, specification or other related things if necessary without notice at any time. Please contact SGMICRO sales office to get the latest datasheet.
ELECTRICAL CHARACTERISTICS: V_S = +5.0V

(At R_L = 150Ω connected to GND, V_{IN} = 1V_{PP} and C_{IN} = 0.1µF, all outputs AC-coupled with 220µF, unless otherwise noted.)

APPLICATION INFORMATION

Functional Description

SGM9123 operates from a single 2.5V to 5V supply. In application, SGM9123 is a fully integrated solution for filtering and buffering SDTV signals in front of video decoder or behind video encoder. For example, SGM9123 can replace three passive LC filters and three amplifier drivers at CVBS and S-video output side in set-top box and DVD player. This solution can help reduce PCB size and production cost, and it also improves video signal performance comparing with traditional design using discrete components. SGM9123 features a DC-coupled input buffer, a 3-pole low-pass filter to eliminate out-of-band noise of video encoder, and a gain of 6dB in the output amplifier to drive 75Ω load. The AC- or DC-coupled input buffer eliminates sync crush, droop, and field tilt. The output of SGM9123 also can be DC-coupled or AC-coupled.

Input Considerations

Besides AC coupling, the SGM9123 inputs also can be DC-coupled. In DC coupling application, no input coupling capacitors are needed because the amplitude of input video signal from DAC includes ground and extends up to 1.4V, and SGM9123 can be directly connected to the output of a single-supply, current-output DAC without any external bias network. In applications where DAC's output level exceeds the range from 0V to 1.4V, or SGM9123 is driven by an unknown external source or a SCART switch which has its own clamping circuit, AC coupling is needed.

Output Considerations

The SGM9123 outputs can be DC-coupled or AC-coupled. When input is 0V, the SGM9123 output voltage is 260mV typically. In DC coupling design, one 75Ω resistor is used to connect SGM9123's output pin with external load directly, and this serial back-termination resistor is used to match the impedance of the transmission line between SGM9123 and external load to cancel the signal reflection. The SGM9123 outputs can sink and source current allowing the device to be AC-coupled with external load. In AC coupling, at least 220µF capacitor will be used in order to eliminate field tilt.

Power-Supply Bypassing and Layout

Correct power supply bypassing is very important for optimizing video performance in design. One 0.1µF and one 10µF capacitors are always used to bypass V_{CC} pin of SGM9123. Place these two capacitors as close to the SGM9123 supply pin as possible. A large ground plane is also needed to ensure optimum performance. The input and output termination resistors should be placed as close to the related pins of SGM9123 as possible to avoid performance degradation. The PCB traces at the output side should have 75Ω characteristic impedance in order to match the 75Ω characteristic impedance of the cable connecting external load. In design, keep the board trace at the inputs and outputs of the SGM9123 as short as possible to minimize the parasitic stray capacitance and noise pickup.

APPLICATION INFORMATION

Typical Application Diagram

The following schematic in Figure 3 is normally used for AC-coupled output and DC-coupled input with DAC which has an output voltage range from 0V to 1.4V. AC-coupled output offers slightly lower power dissipation and high ESD protection ability.

The schematics in Figure 1 and Figure 2 are also popular in design. Figure 4 is a kind of special application in STB.
