## 24V, 3A Peak Output Current

### Rail-to-Rail I/O Operational Amplifiers

#### GENERAL DESCRIPTION

The SGM8418-1, SGM8418-2 and SGM8418-4 are low power, high slew rate, dual or single power supply, rail-to-rail input and output operational amplifiers.

The SGM8418-1 contains single amplifier, the SGM8418-2 contains dual amplifiers and SGM8418-4 contains quad amplifiers. The SGM8418-1/2/4 have a high slew rate ( $65V/\mu s$ ), 3A peak output current and offset voltage below 10mV. The SGM8418-1/2/4 are ideal for Thin Film Transistors Liquid Crystal Displays (TFT LCD).

The single SGM8418-1 is available in a Green TDFN-3×3-8L package. The dual SGM8418-2 is available in a Green MSOP-8 (Exposed Pad) package. The quad SGM8418-4 is available in a Green TSSOP-14 (Exposed Pad) package. They are specified over the -40°C to +85°C temperature range.

#### FEATURES

- Rail-to-Rail Output Swing
- Rail-to-Rail Input
- Supply Voltage Range: 4.5V to 26.5V
- Peak Output Current: 3A
- High Slew Rate:  $65V/\mu s$
- Unity-Gain Stable
- -40°C to +85°C Operating Temperature Range
- Small Packaging:
  - SGM8418-1 Available in a Green TDFN-3×3-8L Package
  - SGM8418-2 Available in a Green MSOP-8 (Exposed Pad) Package
  - SGM8418-4 Available in a Green TSSOP-14 (Exposed Pad) Package

#### APPLICATIONS

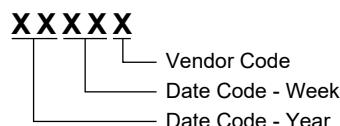

TFT LCD Panels  
Notebook Computers  
Monitors  
LCD TVs

## RECOMMENDED OPERATING CONDITIONS

Supply Voltage Range	4.5V to 26.5V
Operating Temperature Range	-40°C to +85°C

## OVERSTRESS CAUTION

Stresses beyond those listed in Absolute Maximum Ratings may cause permanent damage to the device. Exposure to absolute maximum rating conditions for extended periods may affect reliability. Functional operation of the device at any conditions beyond those indicated in the Recommended Operating Conditions section is not implied.

## ESD SENSITIVITY CAUTION

This integrated circuit can be damaged if ESD protections are not considered carefully. SGMICRO recommends that all integrated circuits be handled with appropriate precautions. Failure to observe proper handling and installation procedures can cause damage. ESD damage can range from subtle performance degradation to complete device failure. Precision integrated circuits may be more susceptible to damage because even small parametric changes could cause the device not to meet the published specifications.

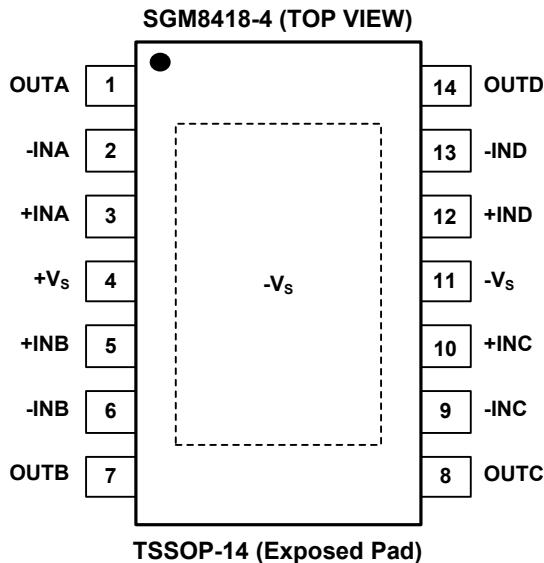

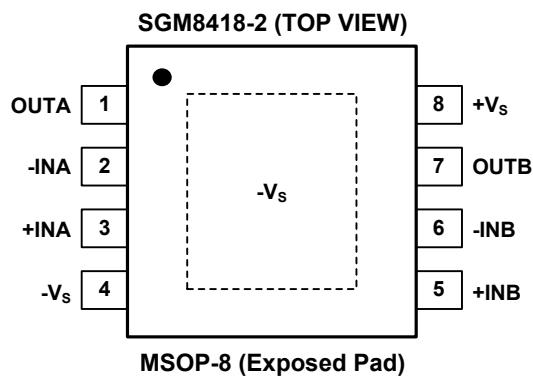

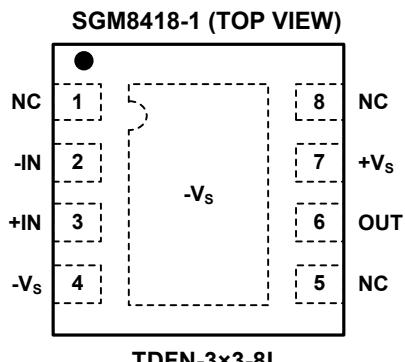

## DISCLAIMER

## APPLICATION INFORMATION

The SGM8418-1/2/4 are high performance operational amplifiers capable of driving large loads for different applications. A high slew rate, rail-to-rail input and output capability, and low power consumption are the features which make the SGM8418-1/2/4 ideal for LCD applications.

### Operating Voltage

The SGM8418-1/2/4 total supply voltage range is guaranteed from 4.5V to 26.5V. The specifications are stable over both the full supply range and operating temperatures from -40°C to +85°C. Decreasing the load current will obtain an output swing even closer to the supply rails.

### LCD Panel Application

The SGM8418-1/2/4 are mainly designed for LCD  $V_{COM}$  buffer. The operational amplifiers have  $\pm 3A$  instantaneous peak source/sink current.

### Thermal Consideration

For continuous operation, do not exceed absolute maximum junction temperature. The maximum power dissipation depends on the thermal resistance of the IC package, PCB layout, rate of surrounding airflow, and difference between junction and ambient temperatures.

The maximum power dissipation can be calculated by the following formula:

$$P_{D(MAX)} = (T_{J(MAX)} - T_A)/\theta_{JA} \quad (1)$$

where  $T_{J(MAX)}$  is the maximum junction temperature,  $T_A$  is the ambient temperature, and  $\theta_{JA}$  is the junction to ambient thermal resistance.

For recommended operating condition specifications of the SGM8418-1/2/4, the maximum junction temperature is +150°C. The junction to ambient thermal resistance,  $\theta_{JA}$ , is layout dependent.

The maximum power dissipation depends on the operating ambient temperature for fixed  $T_{J(MAX)}$  and thermal resistance,  $\theta_{JA}$ .

### Layout Consideration

PCB layout is very important for designing high power circuits. The following layout guidelines should be strictly followed for best performance of the SGM8418-1/2/4.

1. Place the power components as close to the IC as possible. The traces should be wide and short, especially for the high current loop.
2. A series resistance may be needed at the output for some applications.
3. Proper supply bypassing ensures stability while driving high transient loads. For single-supply operation, bypass the power supply  $+V_S$  to  $-V_S$  with a  $0.1\mu F$  ceramic capacitor which should be placed close to the  $+V_S$  pin. For dual-supply operation, both the  $+V_S$  and the  $-V_S$  supplies should be bypassed to ground with separate  $0.1\mu F$  ceramic capacitors. A  $10\mu F$  tantalum capacitor in parallel can be beneficial when delivering high transient output current.
4. Connect a  $0.1\mu F$  capacitor from  $+IN$  to ground and place it as close to the IC as possible for better performance.
5. The exposed pad of the chip must be connected to  $-V_S$  plane for maximum thermal consideration.
