

### GENERAL DESCRIPTION

The SGM72006 is a single-pole/six-throw (SP6T) antenna switch, which supports from 0.1GHz to 3GHz. The device features low insertion loss and high isolation, which make it suitable for diversity reception applications. It also has the advantage of high linearity performance. The SGM72006 is not subject to cellular interference and is applied to multi-mode and multi-band LTE mobile phones.

The SGM72006 has the ability to integrate SP6T RF switch and GPIO controller on a SOI chip. Internal driver and decoder for switch control signals are offered by the GPIO controller, which makes it flexible in RF path band and routing selection.

No external blocking capacitor requirements on the RF paths as long as no external DC voltage is applied which can save PCB area and cost.

The SGM72006 is available in a Green UTQFN-2x2-14L package.

## OVERSTRESS CAUTION

Stresses beyond those listed in Absolute Maximum Ratings may cause permanent damage to the device. Exposure to absolute maximum rating conditions for extended periods may affect reliability. Functional operation of the device at any conditions beyond those indicated in the Recommended Operating Conditions section is not implied.

## ESD SENSITIVITY CAUTION

This integrated circuit can be damaged if ESD protections are not considered carefully. SGMICRO recommends that all integrated circuits be handled with appropriate precautions. Failure to observe proper handling and installation procedures can cause damage. ESD damage can range from subtle performance degradation to complete device failure. Precision integrated circuits may be more susceptible to damage because even small parametric changes could cause the device not to meet the published specifications.
