

### GENERAL DESCRIPTION

The ACP1263/ACP1263D is a general USB power switch with 0.4A to 2.5A programmable current limiting to protect the power source from over current and short circuit damage. It also integrates the over temperature protection. If the die temperature exceeds +150°C, thermal shutdown active to shut off the output MOSFET. Until the die temperature drops to +130°C, The output MOSFET then start turn on again. Otherwise the ACP1263D individually has built-in discharge function to release the output capacitor charge at the moment of shutdown. The devices also can block the current flowing from the output to the input in case of the output is pulled higher than the input voltage under the shutdown. Other features include input under voltage lockout and soft start functions. The device is available in common SOT25 package.

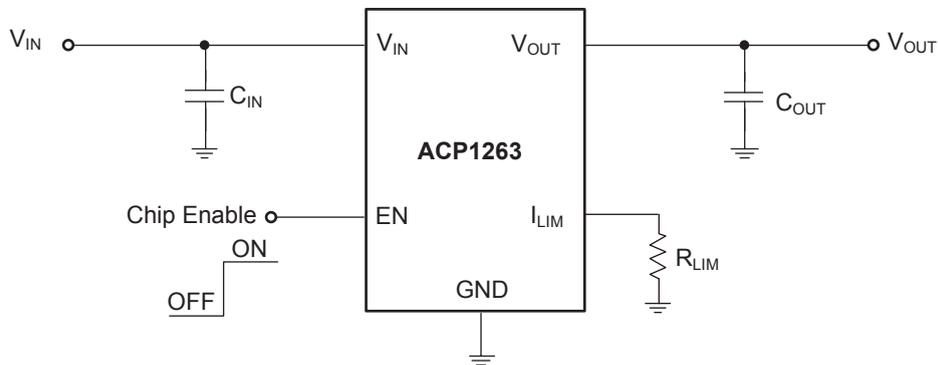

### FEATURES

- 2.5V to 5.5V Input Voltage Range
- 0.4A to 2.5A Programmable Current Limit Range
- Maximum 35µA Quiescent Current
- Typical 0.1µA Shutdown Current
- Soft-Start Function
- Temperature Shutdown Protection
- Under Voltage Lockout Protection
- Reverse Blocking Function Internal
- Automatic Output Discharge
- In Common SOT25 Package

### APPLICATION

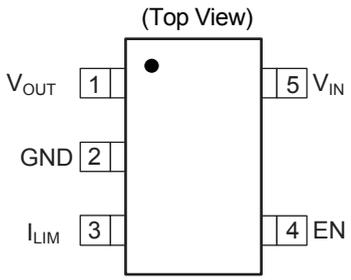

- USB Peripherals
- Mini PCI Accessories
- General Purpose Power Switching
