

## GENERAL DESCRIPTION

The SGM7SZ125 is a single buffer with three-state output from SGMICRO's Small Logic series. The device is fabricated with advanced CMOS technology to achieve ultra-high speed with high output drive while maintaining low static power dissipation over a very broad  $V_{CC}$  operating range. The device is specified to operate over the 1.65V to 5.5V  $V_{CC}$  operating range. The inputs and output are high impedance when  $V_{CC}$  is 0V. Inputs tolerate voltages up to 6V, independent of  $V_{CC}$  operating voltage. The output tolerates voltages above  $V_{CC}$  when in the 3-state condition.

The SGM7SZ125 is available in Green SOT-23-5 and SC70-5 packages. It operates over an ambient temperature range of -40°C to +85°C.

### OVERSTRESS CAUTION

Stresses beyond those listed may cause permanent damage to the device. Functional operation of the device at these or any other conditions beyond those indicated in the operational section of the specification is not implied. Exposure to absolute maximum rating conditions for extended periods may affect reliability.

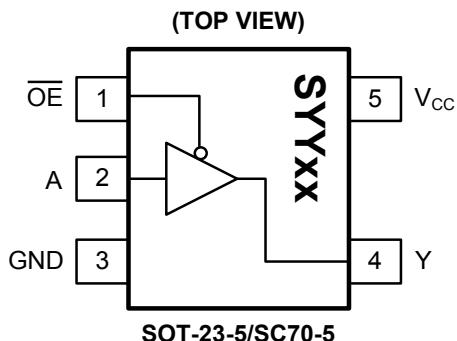

### ESD SENSITIVITY CAUTION

This integrated circuit can be damaged by ESD if you don't pay attention to ESD protection. SGMICRO recommends that all integrated circuits be handled with appropriate precautions. Failure to observe proper handling and installation procedures can cause damage. ESD damage can range from subtle performance degradation to complete device failure. Precision integrated circuits may be more susceptible to damage because very small parametric changes could cause the device not to meet its published specifications.

- Unused inputs must be held HIGH or LOW. They may not float.
- $C_{\text{PD}}$  is defined as the value of the internal equivalent capacitance which is derived from dynamic operating current consumption ( $I_{\text{CCD}}$ ) at no output loading and operating at 50% duty cycle (see Figure 3).  $C_{\text{PD}}$  is related to dynamic operating current  $I_{\text{CCD}}$  by the expression:  $I_{\text{CCD}} = (C_{\text{PD}})(V_{\text{CC}})(f_{\text{IN}}) + (I_{\text{CC,Static}})$ .
